Objective

Software Engineer skilled in scalable **Java** backend development with **Spring Boot**, **microservices**, and **RESTful APIs**. Experienced in distributed systems using **Apache Kafka**, **RabbitMQ**, **Redis**, and search technologies like **Apache Solr**, with working knowledge of **Apache Flink**. Focused on building clean, maintainable systems and eager to grow in **system design** and backend architecture.

Work Experience

Java Developer, Iprotecs Solutions Pvt Ltd – Coimbatore, India 11th AUG 2025 – PRESENT

dforce

- Developed REST APIs and optimized authentication flow by caching user permissions in Redis during token validation, reducing database calls.
- Leveraged Spring Security to manage user authorities and implemented role-based access using `@PreAuthorize`.
- Structured data using TreeMap to deliver chronologically sorted data for calendar-based UI integration.
- Implemented RabbitMQ with Dead Letter Queue (DLQ) for reliable asynchronous processing, including Solr indexing in a microservices architecture.

dhire.ai

- Designed and developed RESTful APIs using Spring Boot to manage core application workflows.
- Implemented interview scheduling logic, improving coordination of interview slots and user workflows.
- Built event-driven communication using RabbitMQ to publish email events, consumed by a Python microservice for asynchronous processing.
- Implemented SSO authentication using Keycloak by dynamically routing users to Azure AD or Okta using `kc_idp_hint` and `login_hint`.
- Applied SOLID principles to develop scalable and maintainable backend services.

dhelix

- Integrated Apache Solr with Spring Boot for efficient and scalable search functionality.
- Diagnosed and resolved Apache Flink connection leaks during Kafka consumption, preventing resource exhaustion and improving system stability.
- Implemented Kafka-based messaging for asynchronous processing using Spring Boot.

Associate Software Engineer, T-Machine Software Solutions – Chennai, India JULY 2023 – JUN 2025

- Developed and maintained RESTful APIs using Spring Boot to support core application functionalities and backend workflows.
- Implemented Redis for caching to improve application performance and reduce repeated database calls.
- Integrated Kafka for basic event logging, capturing user activity for audit and tracking purposes.
- Contributed to Agile development cycles, consistently delivering assigned tasks within sprint timelines.
- Collaborated with QA engineers in a Test-Driven Development (TDD) environment to ensure reliable and high-quality releases.

Project

Backend Blog Management System - Personal Project github.com

- Designed a secure, multi-role backend enforcing strict access control using JWT authentication and BCrypt encryption for Admin, Editor, and Reader roles.

- Integrated Redis caching for trending posts and comment threads, reducing average response times by up to 60% under high-read conditions.
- Developed 15+ RESTful APIs for content management, moderation workflows, and real-time analytics, adhering to clean code and scalability best practices.
- Implemented full admin features including role management, abuse moderation, content visibility toggling, and comprehensive audit logging.
- Applied SOLID principles and modular architecture to enhance maintainability and support seamless feature integration.

Event Booking Application-Personal Project

github.com

- Developed event booking application using Spring Boot, Spring Data JPA, and secured REST APIs with JWT-based authentication via Spring Security.
- Implemented role-based access control and user authentication system, enabling secure login, event management for admins, and booking functionality for users.
- Designed and optimized relational database schema with JPA entities for events, users, tickets, and roles, ensuring data integrity and scalability.
- Built RESTful endpoints and user operations, improving code modularity and maintainability through a service-repository architecture.

Technical Skills

Languages: Java, SQL

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate

Databases & Cache: MySQL, PostgreSQL, Redis

Messaging & Streaming: Apache Kafka, RabbitMQ

Search & Processing: Apache Solr, Apache Flink

API & Tools: REST APIs, Swagger/OpenAPI, Postman

Tools & Environment: Git, GitHub, Maven, IntelliJ IDEA / VS Code

Concepts: Microservices, OOP, SOLID Principles, System Design Basics, Agile

Education

P.S.R Engineering College, BE in Mechanical Engineering

August 2019 – June 2023

- CGPA: 8.038 / 10

- **Coursework:** Industrial training, Design Course, Product Management.

Declaration

I hereby declare that the information provided above is true to the best of my knowledge and belief.
